

ST-911 — Path View Impact Statement

Ticket: ST-911 — Telemetry V5 Schema Sync

Author: Mike (Lead Developer / Build Agent)

Date: 2026-05-14

Impact Assessment

Changes introduced by ST-911 are purely schema-level fixes to `telemetry-parser.ts` (both legacy and engine copies) and `telemetry.ts`. All downstream graders — `phase-detector.ts`, `arc1-grader.ts`, and `landing-scorer.ts` — consume telemetry data via internal keys and require no logic changes.

Lesson gating rules remain unchanged: score ≥ 3 , quiz $\geq 80\%$, and debrief viewed. Students will see no difference in progression or scoring behavior.

This update synchronizes the backend parser with the V5 recorder scripts. It ensures flight data from Arc 1 & Arc 2 is accurately captured for scoring. No changes have been made to the core grading logic (1-5 scale) or lesson gating rules.

Confirmation

- ☐ No lesson gating changes
- ☐ No scoring logic changes
- ☐ No student-facing progression changes
- ☐ Downstream graders unaffected
